**PLEASE IGNORE THIS LETTER IF YOUR CHILD DOES NOT HAVE ASTHMA OR
IF YOU HAVE NOT GIVEN CONSENT FOR YOUR CHILD TO BE VACCINATED**

Dear Parent/Carer,
FLU IMMUNISATION OF PRIMARY SCHOOL CHILDREN WITH ASTHMA

Thank you for completing and returning the form consenting for your child to receive flu vaccination at school in the near future. This letter is for parents who have consented to their child's vaccination and indicated on the form that their child has asthma and uses an inhaler every day. You should have provided information about the inhalers or other medication (such as steroid tablets) your child may take for their asthma.

If you are a parent/ carer of a child with asthma and have consented to their vaccination we are writing to request that you contact us prior to their vaccination if there is any change to your child's asthma as the vaccination may have to be postponed to a later date.

The changes you should tell us about are:

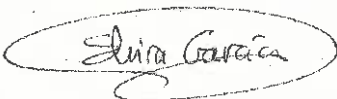

- A change in the type of inhaler, an increase in the strength or number of puffs your child takes each day
- If your child is now taking or has been prescribed steroid or other tablets in the 2 weeks before your child's vaccination is due
- If your child's asthma has become worse in any way in the three days before your child's vaccination is due

Please contact 01294 317822 to tell us about any changes before the immunisation team visit your child's school.

If your child has asthma and is unable to be vaccinated on the day of the school vaccination session your child will be able to receive the vaccine at your GP surgery. If you consented to their vaccination you will be sent a letter home in your child's school bag advising you to make an appointment with your GP practice.

More information on flu and the vaccine is available in the leaflet previously provided and online at www.immunisationscotland.org.uk or call the NHS inform helpline Freephone at **0800 22 44 88**.

Yours faithfully

Dr Elvira Garcia, Consultant in Public Health Medicine
